

Benson

Combustible Gas - Domestic Benson Gas Detector

Applications

- Kitchens with gas cooking appliances
- Alfresco areas with barbeques
- Rooms with gas heaters
- Houses fitted with gas bayonets
- Central gas heating systems
- Provides additional safety for

Combustible Gases.

Every house with a gas appliance should have one fitted, like a smoke detector.

Benson Air Conditioning systems do not require a Gas detector, however we recommend them for your peace of mind.

- Power supply: 220 / 240 volt 50hz, complete with 1m plug lead
- Back up batteries: 3 X size C batteries (not supplied). Battery back up is a requirement under the Australia Standard AS 1677.2
- Size of unit: 165mm W x 90mm H x 45mm Deep
- Alarm Density: Natural & Coal gas 1,000~5,000ppm, LPG 1,000~10,000ppm
- Mounting: Simple 2 screw mounting plate wall type and the detector clips onto this mounting plate
- Mounting position: Many are listed in the installation manual
- Alarm mode: A 90dBa siren will sound and the relay will switch
- Interconnect (optional) voltage free relay (C / NO connections) provides additional safety features, not generally used in domestic installations.
